

ENVIROPAD – ENVIRONMENTAL PROTECTION

This product is an innovative type of drip tray which utilises polymer technology to retain and capture spills of petrol, diesel and oil from smaller containers and products which are engine driven. The Enviropad is used for hire fleets, plant depots and many other industrial and professional applications.

The above-mentioned hydrocarbons are immediately solidified into the pad. They then prevent pollution which could be harmful to the environment and become non-leaching. When the pad has become completely solidified it can then be disposed of with standard hazardous waste matters.

The Enviropad is sold in three different sizes: small, medium and large.

Suitable for:

- Hire fleet
- Plant depot
- Professional use

Description	Retention volume (litres)	Size (mm)	Weight
Small	3	610x460	0.50
Medium	7	900x690	0.75
Large	28	1370x2140	1.00
